

Week 6: Build Web apps with Flask: (Auth section)

This week, we'll cover the following topics:

- Removing flash messages after 5 seconds using javascript
- Implementing delete and edit functionalities for post and categories
- Adding category column to posts model
- Creating User Model
- User Register Form
 - Creating registered user's route
- Login Form
- Introducing Flask-Login
- Protecting routes
- Redirecting to login page when user is not logged in

Requirement

You need to install `flask-login` and `flask-bcrypt` by activating your python environment with `pipenv shell` and running `pipenv install Flask-login flask-bcrypt`
